

**Real-time design companion
for architects and designers.**

Connected design workflow from early ideation to client-ready presentations, with built-in AI-powered exploration.

Enscape is the leading real-time visualization tool that works directly inside your CAD software, so you can see, refine, and communicate design decisions the moment they happen. From early ideation to final presentation, your CAD model stays the single source of truth, helping you align your team, guide client conversations, and move faster without exporting, waiting, or relying on a separate rendering pipeline.

Enscape grows with your project. As your needs expand, it connects to tools that add AI-powered ideation, cinematic presentation, structured collaboration, and sustainability insight — without disrupting how you design or rebuilding what you have already created.

95%

of users rate Enscape as easy to use

88%

of users report faster design workflows

75%

of users report improved collaboration and client communication

★★★★★ 4.6/5

Faster design decision-making

Make faster, more confident choices. Validate spatial, material, & lighting decisions in real time, without leaving your CAD tool.

Easy to use from day one

Designed for architects and designers — intuitive controls, low learning curve, productive from your first session.

Validate concepts before committing

Generate and compare design alternatives directly from your model with AI, before investing time in a full scene build.

Client-ready visuals instantly

Move from real-time exploration to cinematic animation in one click. Walkthroughs, VR, and polished visuals from a single workflow.

Connected workflow, nothing lost

Your CAD model stays the single source of truth — assets, materials, and design intent transfer cleanly across tools, with review and approval built in.

Proven impact for architecture and design teams.

One connected ecosystem. One intuitive workflow.
Everything needed to design, review, and present with confidence.

Unlike other tools, Enscape prioritizes speed, continuity, and design feedback, ensuring that visualization is not a final step, but an active part of the design process.

Real-time workflow

Instantly explore your model directly inside your CAD/BIM tool, with live sync on Windows and Mac. No separate application, no switching windows, and no disconnected workflow.

AI-powered ideation

Generate design alternatives, explore styles & materials, and create image-to-video animations directly from your model. Use built-in presets and AI tools inside Enscape.

Cloud collaboration

Share fully interactive 3D experiences in the browser, with no software install required for clients or collaborators. Collect structured comments, feedback, and approvals in one place.

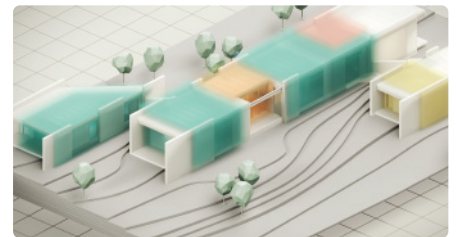

Lighting, Materials & Assets

Manage project lighting, generate realistic materials from real-world photos, & populate scenes with 12,000+ production-ready assets and materials. Search, place, & refine visual detail across Enscape and Chaos ecosystem.

Cinematic presentations

Move from real-time design to cinematic animation, VR, and interactive client walkthroughs without rebuilding your scene. Keep camera paths, visual consistency, & assets intact as you turn design work into polished presentations.

Building performance

Understand how your design performs in context. Visualize surroundings using OpenStreetMap site data, evaluate thermal comfort, energy use, and carbon performance directly in Enscape, and export reports for client review.

Built for architects and designers

Enscape prioritizes speed, simplicity, and design feedback rather than complex rendering settings and lengthy production workflows.

Brian Comeaux
Project Architect, Lake|Flato

Enscape is a game changer as clients are immediately able to understand and experience our vision, eliminating the subjective interpretation of sketches and the resulting misunderstandings and redesign.
